**NEW**

## Ultra LARGE Displays for Industry

The display of clear information and data offers enhanced production line efficiency. These large-format versions feature a flexible modular design that can be customised for many industrial process requirements. They are available from

Metrix Electronics Ltd\* in *Migra* 7-segment numeric, *Migra* dot-matrix alphanumeric/graphical or combined technology formats.

Their light-weight aluminium construction enables single or multi-line displays to be constructed for factory or outdoor use with a wide selection of characters per line. Character sizes up to 250mm in height offer a viewing range up to 100 metres, which can be extended using double-sided models. New graphical versions having a panel size up to 3 x 2 metres (384 x 256 pixels) are said to be the largest of their type available on the market today. Bright red, green or multi-colour (red/green/yellow) LED versions are available. The choice of industrial interfaces covers: Fieldbus (Ethernet, Profibus-DP, CANopen, Interbus), serial, analogue, pulse or BCD inputs.

\*Metrix Electronics is the exclusive UK agent for microSYST Systemelectronic GmbH. Peter Rummer, M.D. commented; "microSYST have nearly 20 years experience in state-of-the-art industrial display systems and interfaces".
