NEW

Compact TV field strength meters for terrestrial & satellite system installers

The S-7825 series are the latest additions to **Sefram's*** family of professional field strength meters. There are two models; each designed to meet the particular installation and maintenance requirements of analogue and digital terrestrial antenna and satellite dish system installers.

The **S-7825** and **S-7825ST** models both cover the 45 to 865MHz band for terrestrial TV, and the 950 to 2150MHz band for satellite TV applications. The **S-7825ST** is additionally equipped for COFDM digital terrestrial and QPSK digital satellite measurements. It also features a fast CheckSat mode – a speedy dish alignment aid.

Their unique mosaic results display enables the user to view signal levels, spectrum and signal quality measurements (C/N, BER & MER) in one backlit colour TFT screen. Channel setups and measurements can be stored in memory and downloaded to a PC via the serial interface.

The convenient padded carrying bag is just 185 x 165 x 290mm in size and, with its adjustable neck/carrying strap, is ideal for field use. Overall weight is about 3.5kg, including the rechargeable battery, which provide around four hours use.
