**NEW**

## Industrial Field Bus Interfaces

New industrial interfaces, now available in the UK from Metrix Electronics, offer cost-effective conversion between Field Bus or Ethernet data and serial data standards.

These compact DIN-rail mounting *miface* interfaces are available to convert data to and from Profibus-DP, InterBus, CANopen or Ethernet TCP/IP standards and electrically isolated RS-232, RS-422 or RS-485 serial ports. The input/output data width is freely selectable up to 200 bytes.

As an application example, data from RS-232 and RS-485 serial devices; such as barcode scanners, printers, sensors and displays, can be simply and transparently converted into Profibus-DP format.

Housed in rugged 100 x 87mm metal modules for 35mm top-hat DIN specification rail mounting, these interface modules only require a 24V, 150mA DC power supply. Configuration is by DIP selector switches and built-in LEDs provide status and diagnostic indications.
