NEW

Graphic Displays with Touch Keys and Field Bus Interfaces

New industrial *mitouch* graphic displays, with a choice of Field Bus or serial interfaces and touch keys, are now available in the UK from Metrix Electronics.

They feature a 240 x 128 pixel backlit LCD, which can display text or graphics, together with five membrane touch keys; all integrated into their IP 65 sealed facia. Electrically isolated data interfaces are designed for use in Profibus-DP, CANopen, ARCNET, or RS-232/RS-485 serial process control systems.

Mitouch displays are supplied with dedicated programming software and a second RS-232 port enables character sets and graphics to be uploaded to their internal 512 kB flash memory.

Their rugged 192 x 120mm metal housing is just 38mm deep, and they only require a 24V, 250mA DC power supply.
