**NEW**

## **Professional DTV signal analysers for satellite, terrestrial and cable system installers – with 7-inch colour screens**

Metrix Electronics announces Sefram's new Expert series TV signal analysers, which feature full professional analogue and digital, normal and high definition TV installer measurements. Five new models in the S-786X series cover comprehensive measurements of MPEG-2 and MPEG-4 digital satellite (DVB-S/DVB-S2, QPSK/8PSK), terrestrial (DVB-T, COFDM) and cable (DVB-C, QAM) signals.

All models feature a large 7-inch wide-screen TFT to show free-to-air TV pictures, spectrums and detailed measurement displays. The AutoSet mode adds all selected signals to the Measurement Map to record power, C/N, BER and MER. CheckSat simplifies satellite identification and dish alignment. The level measurement screen simultaneously displays the associated spectrum. The high-sensitivity input enables terrestrial BER/MER readings down to 35dB $\mu$ V and Impulse Response checks for echo errors. All units have an ultra-fast spectrum, plus enhanced analyser modes in the top range Expert models. Digital TV pictures can be shown together with on-screen network information information. The premium S-7866 model also has an integrated GPS receiver for mapping applications and ASI outputs. Optional adaptor for WiFi signal measurements. They have a compact housing, water resistant front panel, rugged carrying case, weigh just 2.1kg and are backed by a two year warranty.
