NEW

Truly Portable 3.3GHz & 8.5GHz Handheld Spectrum Analyzers for Rapid and Precise Signal Analysis

B&K Precision's new handheld spectrum analyzers are compact, light weight, and cost-effective instruments for rapid and precise signal investigations in the field.

Three models in the series all feature a large colour screen, extended 4hr battery life and weigh just 1.8kg. The BK-2650A covers the frequency range from 50kHz to 3.3GHz, the BK-2652A adds a built-in tracking generator and the BK-2658A extends the frequency coverage to 8.5GHz.

Key features include channel / adjacent channel power, occupied bandwidth, electric and magnetic field strength measurement functions, PC software for remote control and documentation of measurement results, convenient Auto Tune function and SCPI-like remote control commands. Applications include:

- Installation, maintenance and troubleshooting of wireless communications systems such as W-CDMA/CDMA, GSM, WLAN, WIMAX, and Bluetooth.
- Detection of signal interference and undesired emissions
- TV and broadcasting signal analysis and Antenna alignment
- Electric field strength measurement with optional dipole antennas
- Magnetic field strength measurement with optional magnetic field probe

All instruments come with carrying case, PC software, USB cable and a two-year warranty.
