Industrial Panel Printers with USB or Profibus Options

USB and Profibus interface options have now been added to the **IPP 144-40 GE** industrial panel printer family. These fast, compact (144 x 72mm DIN size), graphics printers are ideal for printing measured data, status and fault reports in many instrumentation, automation and industrial process applications. Having an internal text memory and real-time clock, these enhanced versions feature the ability to print pre-stored messages, with embedded variable data, and automatically append date and time.

Their long-life, fixed head, thermal mechanism, enables rapid, high-resolution printing. This can be alphanumeric text from 8 to 48 columns, barcodes or bitmap graphics – compatible with Windows® printer drivers. The extra wide 80mm thermal paper is 'document proof' with image retention up to 10 years in normal conditions. Available with a choice of AC or DC supply voltages. Optional accessories include paper re-roll unit and protective cover.
