NEW

Graphic & Dot-Matrix Displays with Field Bus Interfaces

New industrial *mitex* graphic and alphanumeric displays, with a choice of Field Bus or serial interfaces, are now available in the UK from Metrix Electronics.

They feature backlit graphic LCDs, with resolutions up to 240x128 pixels; 2x20, 4x20 or 2x40 character alphanumeric vacuum fluorescent, or 1x8 and 1x24 character dot-matrix LED displays. The choice of electrically isolated data interfaces are designed for use in Profibus-DP, CANopen, ARCNET, InterBus, RS-232 or RS-485 process control systems.

Mitex graphic versions are supplied with dedicated programming software and a second RS-232 port enables character sets and graphics to be uploaded to their internal 512 kB flash memory.

They have rugged metal housings with IP 65 sealed facias, and they only require a 24V DC power supply.
