NEW

Industrial Control Panels with Profibus-DP or Serial Interfaces

The new MITAS BBT32-T industrial control panels from Metrix Electronics feature simpler wiring than traditional installations, with Profibus-DP or RS485/RS232 serial interface connections.

They are available in a choice of housings designed for panel or wall mounting, as well as free standing pedestals. With an installation depth of just 35mm, they are also suitable for mounting directly into control cabinet doors.

The panels incorporate 32 user-definable keys with LED indicators, three digital sensor inputs and three control outputs. The key functions are defined by printed slide-in label strips and the front panel meets IP65 protection standards.

Warning or information monitoring messages can be displayed on the built-in 2-line x 24-character LCD display. The operator can use the designated “+” and “-” keys to read messages which are also saved in a CSV file format on an SD card.

Optional features include an emergency stop or key switch.
