NEW

Rugged meters for digital terrestrial and satellite TV systems

Metrix Electronics announces Sefram's new 7846 TV signal analyser offering comprehensive measurements of digital satellite (DVB-S and DVB-S2) and terrestrial (DVB-T) systems.

The bright LCD colour display shows standard MPEG-2 and high-definition MPEG-4 free-to-air digital TV pictures and detailed measurements. These include: BER, MER lost packets and noise margin; plus an ultra-fast frequency spectrum, constellation and guard interval diagrams. Measurements can be saved to a USB memory stick for transfer to a PC. The fast CheckSat mode simplifies satellite dish alignment. Other features include rugged compact housing, more than 2-hour battery life and a weight of just 1.5kg.
