NEW

Clamp-on Power Meters

Three new clamp-on power meters, for electrical applications, are now available from Metrix Electronics.

The MW3515 and MW3525 measure currents up to 600A AC and 600A AC+DC true RMS respectively and power up to 600kW. The higher power MW3535 model measures up to 1000A true RMS current and power up to 1000kW. Measurements are displayed on a large backlit LCD with digital and bargraph indications.

As well as voltage, resistance and continuity functions, each of these three power clamps also has power factor, harmonics, frequency, capacitance and phase sequence features. Their extensive capabilities are supported by a non-contact voltage detector and LED illumination of the clamp jaw. The MW3535 also has temperature measurement with a k-type thermocouple and large 42mm jaws.

They comply with 600V CAT IV safety standards.
