

## Metrix designs custom LED display for power station refit

### Products

OC557 LED display

### Customer

Instrumentation contractor

### Application

Control-room remote displays

### Specifications

OC-557 LARGE FORMAT 5  
DIGIT PROG. PANEL METER

288x96MM

57MM DIGITS, GREEN

INPUT: 4...20mA

SCALE RANGE: 0-600° C

POWER SUPPLY: 24VDC

2 SETPOINT RELAY OUTPUTS

Metrix Electronics Ltd was approached by an instrumentation contractor working on a power station refit.

The task was to find a large digit LED numeric display with process input in a compact housing.

There was no suitable display on the market offering 57mm digits so the Metrix Technical Team put together a design specification and approached its technology partners for their creative input.

After prototyping and with the customer feedback incorporated in the final design (including the addition of output relays) the new product was ready for production. An initial batch of 100 displays was delivered and installed and the power station successfully recommissioned.

The display has entered the Metrix standard range as the OC557.
